PROPOSAL FOR A 2021 BPF ON CYBERSECURITY

lombonana Andriamampionona
2021 proposal builds upon 2019/20 work to support ongoing development of cybersecurity norms in UN and elsewhere:

- 2019 – best practices in relation to implementation of recent international cybersecurity initiatives

- 2020
  - deeper analysis of agreements that are focused on norms
  - examination of development and enforcement of norms in other areas
WHAT IS NEW IN 2021

- Continue to look at norms, with new analysis into factors that can drive or undermine norms in the area of cybersecurity

- New focus in 2021 on what can be learned from major cybersecurity incidents and attacks

- Added dimension of bringing in voice of victims and responders

- Reflect also on what can be learnt from how incidents in other areas have impacted norms e.g., environmental protection
OUTREACH IN THE CONTEXT OF THE ROADMAP FOR DIGITAL COOPERATION

- Bring in new perspectives at the beginning of the work:
  - Organisations that have chronicled cyber incidents
  - Academics who assess norms in respect to incidents
  - “Norm entrepreneurs”
  - Experts in LDCs and SIDS

- Links to UN discussions:
  - Roadmap’s call for a Global Statement on Trust and Security
  - Ongoing UN GGE and OEWG processes
THANK YOU!
