

Good morning people. I will send my contributions from here ok?

In the Text of phase II I want to strengthen some words to make more explicit some ideas to improve the access as a human right, like was said in *Universal Declaration of Human Rights* ok.

Lets go :

For example: **level of market development, communitarian initiatives and digital policies development to access as a human right**, competition environment, capacity-building, technical infrastructure, access to information and content, cybersecurity, etc.

####

While all of the SDGs are equally important to consider, some (like, for example, affordable connectivity and access to infrastructure, the cross-cutting use of ICT tools, digital literacy and skills, capacity-building, **democratic regulations for social and non-profit initiatives and self management**) can be viewed as building blocks to support other SDGs.

Examples of success stories in using the Internet to address real world problems in least developed and developing countries should be inclusive of examples in e-government, e-agriculture, e-health, e-education, e-innovation and e-commerce; **e-democracy**; of how ICTs could be used to empower women and girls; the importance of the mobile industry to connectivity in

developing regions (**PS.: remembering that mobile connectivity is just a part and complement for the access. To have capability to guarantee all the web can give we need to support the rest of the infrastructure of fibers too and with unbundling models, like digital cities and BroadBand Plans**); as well as other innovations in areas facing pandemics, such as use of high-speed Internet in fighting Ebola.

#####

1) Build strategic alliances with key players at all levels :global, regional, national, local:development workers and communities, World Bank, International Telecommunication Union (ITU), UN Educational, Scientific and Cultural Organization (UNESCO), UN Conference on Trade and Development (UNCTAD), CSTD, regional commissions, European Union (EU), African Union Commission, NEPAD, Institute of Electrical and Electronics Engineers (IEEE), Association for Progressive Communications (APC), Web Foundation, GSMA, LIRNEasia, other civil society organizations; International Chambers of Commerce (ICC), relevant ministries and national agencies of Education, health **and infrastructure, academy**, local governments, NGOs, etc.

**2) Build strategic alliances with key non-governmental initiatives:** 2030 SDGs, Global Connect Initiative,

Alliance for Affordable Internet, WEF Internet for All initiative, etc. The strategic alliance **should** also deal with innovative funding mechanisms **and propose to governments to create public funds to expand capacity-building of common networks with universal unbundling rules.**

I think is this folks.

Lets keep walking 😊
