Online Protection of Underage Users

The rapid evolution of internet has brought with it great opportunities for children: it allows them to do research, enhance knowledge and skills, play and socialize, and participate in a much wider range of cultural and educational activities. At the same time, internet may present risks that compromise children's safety and well-being such as harmful information, cybersecurity and so on.

We always bear in mind that the basic rights of children prescribed by the United Nations Convention on the Rights of the Child and that its protocols is applicable both online and offline; we are deeply concerned about the risks that the Internet poses to children.

It's agreed that all the stakeholders have important responsibilities in protecting children from Internet infringement and it has become one of the most important issues of international internet governance. Promote the discussion on how to use policies, laws, economics, and technical means to strengthen the online protection of children can help the international community to reach the consensus and achieve the goal of children online protection.
